Vũ Hữu Đô

Full Stack Developer (.NET · React · SQL Server) | Digital Transformation · Workflow Automation | AI Graduate — Docker, CI/CD, Data Lakehouse
Tân Bình, Ho Chi Minh City, Vietnam

Summary

A recent Artificial Intelligence graduate with 1.5 years of practical experience at Hoan Cau Group. While officially holding the title of Web and Database Developer, my core expertise lies in leading Digital Transformation initiatives, system digitization, and workflow automation. Proficient in .NET (C#, ABP Framework), React + TypeScript, Python, database management (SQL Server, PostgreSQL, ClickHouse), and server environments (Linux, Docker, WSL), with hands-on experience building a central SSO service (OpenID Connect), a Medallion-style data lakehouse (S3, Rust core), and integrating AI (such as Gemini API) into enterprise operations. Strong analytical skills and a proven track record of deploying large-scale business software and internal management platforms with CI/CD, monitoring and rollback-safe releases.

Experience

HoanCauGroup

Web and Database Developer
June 2025 - November 2026 (1 year 6 months)
Ho Chi Minh City, Vietnam

Full Stack Development: Built and shipped internal platforms end-to-end — .NET (ABP Framework) APIs, React + TypeScript interfaces and SQL Server — including an enterprise reporting platform (multi-entity period reporting, approval workflows, dashboards) and a project-data platform, both in production.
Identity & SSO: Implemented a central single sign-on service (OpenID Connect / OAuth2) for internal applications — PKCE flows, role-based access, session and audit management.
Data Platform: Built a Medallion-style data lakehouse (ClickHouse, PostgreSQL, S3) with a Python API, Svelte UI and a Rust core for file parsing and export; sharded CI cut test time by ~65%.

Server & DevOps: Built and configured database servers from the ground up. Handled DevOps responsibilities including server maintenance, Docker containerization, and working within Linux/WSL environments — plus CI/CD with test gates, monitoring (Prometheus/Grafana), scheduled backups and rollback-safe releases.
AI & Automation: Developed Python scripts running in WSL combined with the Gemini API to automate internal workflows and optimize data processing.
Digital Transformation & System Digitization: Spearheaded the digitization of internal operations across regional branches, successfully deploying Base.vn to standardize workflows and significantly enhance corporate communications.
Project Management: Summarized and tracked the progress of key enterprise-wide projects, reporting directly to the Board of Directors to ensure milestones were met.

Education

Van Lang University

Bachelor of Artificial Intelligence, Artificial Intelligence · (2023 - 2026)
